About me

I'm a designer who loves to craft great interaction experiences, the absolute obsession over my product's experience and the kind of impact it has, is what keeps me awake and motivates me to push harder.

Projects

- Conceptualised and designed next generation dashboard for realtime monitoring, analysis and predictive servicing for next generation connected elevators and escalators of a leading manufacturer.
- Visually updated and improved the user experience of an existing API portal page of a leading elevator manufacturer while aligning to the brand guidelines and branding. Also, giving it a clean visual feel as most modern websites.
- Explored an e-commerce opportunity for a major dental supplies manufacturer by consulting several dentists and vendors across major indian cities.
